

Not in
The Toilet

Not in
The Trash

Fact: Throwing medicines in the garbage is not safe - especially for narcotics and other highly addictive and dangerous drugs - because the drugs can be found and used by others, even if they are mixed with undesirable materials like coffee grounds or kitty litter. Prescription drug abuse is the fastest-growing drug problem in the county. Prevent drug theft and abuse by using a medicine take-back program to dispose of your unwanted medicines.

Fact: Crushing pills to disguise them before disposal is difficult and dangerous and puts the handler at risk of exposure to the drug through skin contact or by breathing in the dust. Many medications are designed to release in the body over time, and crushing pills can release a dangerously high dose. The pill dust may endanger other family members and pets in the home, and some medications can be especially harmful to children and women of childbearing age.

Fact: Throwing unwanted medicines in the household trash does not ensure that curious kids can't get at them. There's an epidemic of accidental poisonings from medicines in our homes - and children are the most common victims. Also, pets and animals are not deterred by kitty litter or other substances when getting into the trash and can potentially ingest the unused medicines. **Human medications are the leading cause of pet poisonings**, most often from trash-related toxic exposures.

Fact: Modern landfills are well-designed, safe, and handle standard household waste well. However, medicines are a special type of hazardous chemical that we need to keep out of our solid waste system and landfills to prevent harm to people and the environment. Drugs can be very toxic for people and wildlife, even in low doses.

Local agencies have worked hard to obtain grants and other sources of funding to provide our communities with a safe way to dispose of their unused medication.

Returning your unwanted medicines to a take-back program is the safest and most environmentally protective way to dispose of unused medication.
